## **Invited Talk Abstract**

### **Additive Manufacturing at Everllence – Serial & series production in a transforming market**

Everllence, formerly known as MAN ES, develops solutions for decarbonizing the global economy. As the energy sector is transforming rapidly, short innovation cycles and quick response to customer demand are vital. With traditional supply chains under serious strain, metal 3D printing becomes a key factor – from prototyping to sustained series production. The presentation highlights selected application examples and discusses potential and challenges that arise when integrating 3D printing into existing industrial-scale production chains.
